

ENICA

Location: Pontypridd
Founded: 2006

Sector: Energy consultants

Enica was formed in 2006 from a partnership between David Harden and Bryan Mullen. David previously worked as a project manager in the land remediation industry and Bryan as a sole trader in energy consultancy for the last 10 years.

Identifying that many businesses do not understand where when and how their energy is being used, Enica set out to tie in energy consultancy with energy metering – after all, metering gives the basis for identifying cost and CO2 savings.

In early 2008, Enica received a massive boost by winning the opportunity to roll out the Assembly Government's Smart Metering Pilot Trial in conjunction with Carbon Trust and Bridgend Council.

Enica's unique approach to using innovative ways of converting ordinary meters into Smart Meters has proven invaluable to keep this project on track.

David Harden said: "Without our technology, we would have had to replace some very large gas meters on this project as they were so old. Replacing meters is costly, time-consuming and disruptive to site owners. The project simply wouldn't have gone ahead without the technology we have".

Enica is now expanding its product range, introducing some inventions to make Smart Metering even easier to implement.
